CLINICAL SUMMARY & RECOMMENDATIONS

AI-Assisted Analysis — For Physician Review

- | | |
|--|---|
| 1. Mild Anaemia | Hb 11.2 g/dL with low RBC & HCT, elevated RDW. Suggest ferritin, serum iron, TIBC workup to rule out iron deficiency vs chronic disease anaemia. |
| 2. Dyslipidaemia | Elevated total cholesterol (228), LDL (152), triglycerides (192) and depressed HDL (38). Cardiovascular risk classification: MODERATE-HIGH. Dietary intervention + statin therapy review advised. |
| 3. Pre-diabetes / Impaired Fasting Glucose | FBS 118 mg/dL (impaired range) and HbA1c 6.2% (pre-diabetic). HOMA-IR of 4.2 indicates insulin resistance. Lifestyle modification + follow-up OGTT recommended within 4 weeks. |
| 4. Mild Hepatic Stress | Marginal AST, ALT and GGT elevation. Consider alcohol history, NAFLD screening (USG abdomen). Retest LFT after 6 weeks. |
| 5. Hypokalaemia (mild) | Potassium 3.3 mEq/L — low normal. Assess for diuretic use, GI losses. Consider oral K+ supplementation and dietary review. |
