

Patient Name

Mr. Venkatesh Subramanian

58 Years | Male | Blood Group: O+

Patient ID

APL-2024-18843

Ref. Doctor

Dr. R. Krishnaswamy, DM Cardiology

Collection

03 Jun 2026 | 06:30 AM (Fasting)

Report Date

03 Jun 2026 | 11:45 AM

CARDIAC BIOMARKERS

Panel: CARD-001 | STAT

INVESTIGATION	RESULT	UNIT	BIOLOGICAL REF. INTERVAL	STATUS
Troponin I (High Sensitivity)	0.089	ng/mL	< 0.040	CRITICAL
CK-MB (Creatine Kinase-MB)	38.4	U/L	< 25.0	HIGH ▲
BNP (B-Natriuretic Peptide)	620	pg/mL	< 100	HIGH ▲
NT-proBNP	1850	pg/mL	< 300 (<75 yrs)	HIGH ▲
LDH (Lactate Dehydrogenase)	285	U/L	140–280	HIGH ▲
Myoglobin	92	ng/mL	< 90	HIGH ▲
D-Dimer	0.62	mg/L FEU	< 0.50	HIGH ▲
Homocysteine	18.4	umol/L	5.0–15.0	HIGH ▲
hs-CRP (High Sensitivity)	8.9	mg/L	< 1.0	HIGH ▲
Fibrinogen	485	mg/dL	200–400	HIGH ▲

ADVANCED LIPID PANEL

Panel: LIP-002 | Fasting 14 hrs

INVESTIGATION	RESULT	UNIT	BIOLOGICAL REF. INTERVAL	STATUS
Total Cholesterol	268	mg/dL	< 200	HIGH ▲
LDL Cholesterol (Direct)	185	mg/dL	< 70 (High CV risk)	CRITICAL
HDL Cholesterol	32	mg/dL	> 40 (Male)	LOW ▼
VLDL	51	mg/dL	5–40	HIGH ▲
Triglycerides	255	mg/dL	< 150	HIGH ▲
Lipoprotein (a) [Lp(a)]	78	mg/dL	< 30	HIGH ▲
ApoB / ApoA1 Ratio	1.42		< 0.9 (M)	HIGH ▲
Non-HDL Cholesterol	236	mg/dL	< 100	HIGH ▲

ECG INTERPRETATION SUMMARY

Performed: 03 Jun 2026 | 07:10 AM

Heart Rate	94 bpm	Rhythm	Sinus Rhythm with PVCs
------------	--------	--------	------------------------

PR Interval	210 ms ■ Prolonged	QRS Duration	112 ms
QT/QTc Interval	448 / 468 ms ■ Borderline	ST Segment	Depression V4–V6 (1–2mm)
T-Wave	Inverted V4, V5, V6	Axis	Left Axis Deviation

CLINICAL IMPRESSION
1. NSTEMI Suspected — Significantly elevated hs-Troponin I (0.089 ng/mL), CK-MB, and ST depression in V4–V6 are consistent with Non-ST Elevation Myocardial Infarction. Immediate cardiology intervention recommended. 2. Severe Dyslipidaemia — LDL 185 mg/dL with Lp(a) 78 mg/dL represents very high cardiovascular risk. Aggressive statin + ezetimibe therapy indicated. 3. Heart Failure Markers Elevated — NT-proBNP 1850 pg/mL and BNP 620 pg/mL suggest cardiac decompensation. Echocardiography STAT. 4. Hypercoagulable State — Elevated D-Dimer and Fibrinogen; rule out pulmonary embolism.

Dr. Meenakshi Rajan, MD DM Consultant – Cardiologist Apollo Hospitals Chennai Reg: MCI-77301	Dr. Srinivasa Rao, MD Head – Clinical Pathology Apollo Hospitals Chennai Reg: MCI-44218	REPORT VALIDATED 03 Jun 2026 11:45 AM Digitally Authorized Apollo Lab System v4.2
